Vehicle Inspection Procedure

Every vehicle is inspected before each shift by the driver taking it out.

The inspection covers tyres, lights, brakes, mirrors and the load restraint system.

Vehicle Inspection Procedure | revision 7

Meridian Logistics - Confidential

Tyres and brakes

Tread depth below 2.4 millimetres fails the inspection and the vehicle is withdrawn.

Brake travel greater than 40 millimetres is recorded as defect code BR-118.

Vehicle Inspection Procedure | revision 7

Load restraint

Straps showing any cut through the outer weave are replaced, never repaired.

A vehicle failing load restraint is withdrawn under defect code LR-204.

Vehicle Inspection Procedure | revision 7

Recording and escalation

Every inspection produces a record whether or not a defect is found.

Three failed inspections on one vehicle within thirty days escalate to the fleet engineer.
